Volunteers Needed for Data Collection Using a Hydraulic Bed Sensor

The Center for Eldercare and Rehabilitation Technology (CERT) is looking for volunteers who could participate in a research study to validate information collected from our hydraulic bed sensor. As a participant, you would be asked to lie on the bed and perform some short exercise using an stationary bike (optional). The study will take approximately from 10 to 45 minutes. In appreciation of your time, you will receive an individually wrapped candy or a pen.
